

GrizzlyCorps Program Impact

2020–2025

Projects across California 2020–2025

GrizzlyCorps projects have benefited every county, serving locally and/or statewide.

Projects*

36

21

*Baseline represents 21 projects with statewide focus.

This map illustrates the cumulative number of projects by county across California from 2020–25, highlighting both widespread geographic reach and deeper concentrations of activity in northern counties.

Hosting a Fellow strengthened 2024–25 Partners' ability to sustain community resilience.

● Pre-capacity ● Post-capacity

Our organization has the technical knowledge and training needed to effectively address resilience.

Our staff are familiar with all the issue specific resources we need to efficiently plan and implement resilience work.

Our organization can support landowners' and/or local farmers' transition to practices that support resilience.

Our staff has the capacity/expertise to generate community awareness and engagement in this issue to support our resilience project(s).

Our agency has sufficient staff allocated to respond appropriately to resilience.

Our organization has sufficient capacity to develop conservation management plans.

Our organization has the funding we need to address resilience for our community.

2024–2025 Partners lead in the following project issues:

Primary Secondary

Regenerative Agriculture

29% 21%

Fire Preparedness & Management

25% 29%

Watershed Health

21% 50%

Forest Health

17% 33%

Projects address interconnected challenges, recognizing the need for integrated solutions. Together, GrizzlyCorps projects strengthen climate resiliency, reduce risk, and support sustainable land and water stewardship across communities.

As shown below, partners consistently report strong organizational and community-level capacity for climate resiliency and appear better positioned to lead and sustain initiatives within their communities after hosting a Fellow.
